

#### **Triathlon Performance Solutions Presents:**

The Twelve-Week Race Plan

**Race Distance: Sprint** 

#### Athlete Level: Beginner athlete in your first or second year of sprint triathlon competition

#### Hours Per Week: Five to six

This training plan is to be used in conjunction with a Garmin GPS multisport device or devices. The plan is written so that each session is easy to understand and can be uploaded to your device via the Garmin Training Centre software so your device acts as your coach for each session, guiding you through every step.

The plan is intended to be used as a starting point and is meant to be flexible, so move sessions and days around to fit in with your life when you need to, but try to avoid cramming too many Hard sessions back to back. If you don't have enough time to complete a full session, go out and do what you can. A 10-minute run is better than no run at all and it reminds the body what you are training for.

This plan assumes the athlete is starting from a low to medium aerobic base of fitness.

If you come from a single sports background, consider replacing one session in that sport with your weakest discipline once every 2–3 weeks.

Aim to be as consistent as possible. Consistency is the key to athletic improvement. Take the long view: you won't develop much in a week but you can progress a lot in 12 weeks.

Good luck and enjoy the journey.

GARMIN

#### **Technical Terms:**

Back: Backstroke swimming technique.

Breathing Pattern: The number of strokes you take between breaths. It's a good idea to have a regular breathing pattern as this will help you to find a rhythm and focus in open water especially.

Build: A repetition or session which increases in intensity and/or pace as you go through it.

Catch: After your hand has entered the water to begin your stroke you have the catch phase, where you need to grab as much water as possible with your palm and forearm so you can then pull your body over the water.

Dead Spot: When cycling you have two dead spots during the pedal stroke – one at the dead top and one at the dead bottom. Pedalling efficiently means you minimise the time spent in each dead spot.

Fartlek: A session where you mix your speed/intensity but never actually stop. Literally: to play with speed. Free: Freestyle. Also known as Front Crawl swimming style.

OWS: Open Water Swimming: swimming outdoors in a lake, river, the sea etc. Many races in the UK are open water but there are also a lot of pool-based triathlons, especially early and late season. If you're doing an open water race make sure you practise a few times before your event.

Recovery: Time within a session where you are static or moving very slowly to allow the body to recover before the next bout of exercise. Reps: Repetition: repeated time or distance exercises within a training session.

RPM: Revolutions Per Minute. The number of full revolutions one leg makes in a minute of cycling or the number of contacts with the ground one foot makes in a minute of running. Also described as Cadence.

Tech: Technique session: session where you are focusing on improvements to technique over speed or intensity. Turbo: A piece of bike training equipment that locks your bike into a stationary position and applies resistance so you can cycle indoors. Usually a triangular frame. TT: Time Trial: an effort against the clock where you are aiming to go as far or as fast as possible against a set time or distance target.

#### **Intensity Guideline**

#### Easy or Zone 1:

Basic aerobic endurance training, 50-60% of your maximum heart rate. This zone is the basis of all endurance training and is vital to your ability to support training in the upper zones.

#### Steady or Zone 2:

Using the mid to upper levels of the aerobic system at 60-70% of your maximum heart rate. You should still be able to talk to someone while training at this intensity; it is at or just below race pace for many athletes.

#### Tempo or Zone 3:

This intensity is used mainly in repetitions and progressive sessions and is 70-80% of your maximum heart rate. This intensity corresponds to race pace/intensity for a well-trained athlete. Conversation in this zone is difficult and generally brief.

#### Hard or Zone 4:

This zone is 80-90% of your maximum heart rate. Training in this zone increases your ability to process oxygen and lactic acid and pushes your maximal aerobic capacities higher but this can only be sustained if you have a good base in the lower intensities.

#### Max or Zone 5:

Close to maximum pace and can only be maintained for short periods of time (1–8 minutes). This intensity corresponds to 90-100% of your maximum heart rate and is used sparingly in training compared to the other zones but it can have big benefits to production of power/force and maximum oxygen uptake.

# **Phase One – Establishing Base Fitness** – This phase is to establish your Base level endurance. This is a key stage that allows you to support the latter, higher intensity phases. Aim to be as consistent as possible.

Week	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
	Set 1: 200m Z1 Free and Back Mix Set 2: 3x200m Z1 Pull + 20sec working on an early catch Set 3: 200m Z1 mix of free and Kick Don't worry too much about speed on this	Set 1: 20min Z1 Do 5–10 min of light mobility work before commencing your run. Aim to hold a consistent HR and pace so don't go out too hard. You should finish feeling good. 5min stretching to finish.	off to recover from your first couple of days. You might not feel as though you need it but the goal is to be consistent and taking recovery before you feel you need it will help this. Do some light stretching or get a massage if you can.
