

Database Administrator

We are looking forward to meeting any Database Administrator eager to provide technical expertise in the configuration and administration of SQL Server, MySQL, and Oracle database servers at Garmin Cluj office.

This is not your typical application development job.

At Garmin, we work with hardware that communicates to mobile applications and other devices. Garmin is a great place to work if you love developing products that make a difference and are passionate about technology.

Our benefits are designed to lead an evolving marketplace, support innovation and encourage a healthy balance between work and life. They allow our associates to make their own decisions about their wellbeing and future and consistently rank Garmin as a top tier benefits provider when compared to other high-tech employers.

Your role would be to provide reliable solutions to a variety of problems using sound problem solving techniques including performing root cause analysis and identification of corrective action for given problems, perform and plan minor version upgrades.

Initially, your focus will be on the Sensitive Data Discovery service.

Other essential functions include:

- Configure and administer MySQL, SQL Server and Hadoop databases
- Configure and administer Oracle database servers
- Analyze existing database systems and recommend improvements
- Working with a distributed team to support over 800 databases performing basic maintenance and support requests
- Work with IT Managers to establish database security structures, SOX compliance
- Create and maintain database access systems including tables, indexes, views, stored procedures, and triggers
- Administer database replication between servers, across Local Area Network and Wide Area Network
- Tune and optimize database objects
- Provide 24x7 on call support
- Demonstrates proficient use and knowledge of standards and procedures
- Develop reliable solutions to complex problems which require the regular use of ingenuity and creativity
- Research new technologies and proposes cost effective solutions
- Contribute to, support, and enforce adherence to the application and technology roadmaps and development standards during day-to-day interactions and collaboration with the development teams.

- Performing reviews of all technical design and code changes for a specific, assigned portion of the overall applications and integrations code base; providing direction and recommendations to application implementation teams and developers where necessary

We are looking for a person with the following **skills and knowledge**:

- Skilled with MySQL, SQL Server;
- Demonstrated experience with designing solutions for multiple groups and/or disciplines
- Relevant education and/or experience in software design, development and maintenance, as required for the successful performance of the essential functions of the position
- Target-oriented, analytical approach
- Personal commitment to high quality
- Perfect communication skills (English), both verbal and written
- Previous experience working in a team environment

Desirable **qualifications and background** include:

BSc in Computer Science, IT or similar

Would be a plus: Oracle and Hadoop
