For additional instructions while you are using MapSource, click **Help > MapSource Help** or press **F1** on your keyboard to open the detailed MapSource Help files.
Thank you for choosing Garmin® MapSource®—the complete tool for managing your Garmin GPS unit. MapSource provides detailed geographic data that you can view on your computer or load on your GPS unit. This manual has been provided to get you started. For detailed information about using MapSource, refer to the Help system.

**Serial Number**

Use this area to record the serial number (8-digit number located on the back of the box) in case your MapSource software needs support. Keep your original sales receipt in a safe place or attach a photocopy inside the manual.

Serial Number: ____ ____ ____ ____ ____ ____ ____ ____

**Contact Garmin**

Contact Garmin if you have any questions or if you should encounter any difficulty while using MapSource.

In the U.S.A, contact Garmin Product Support by phone at 913/397.8200 or 800/800.1020, Monday–Friday, 8 AM–5 PM Central Time; or go to [www.garmin.com/support](http://www.garmin.com/support).

In Europe, contact Garmin (Europe) Ltd. at +44 (0) 870.8501241 (outside the UK) or 0808 2380000 (within the UK).

**Map Data Information**

One of the goals of Garmin is to provide customers with the most complete and accurate cartography available to us at a reasonable cost. We use a combination of governmental and private data sources, which we identify in product literature and copyright messages displayed to the consumer. Virtually all data sources contain some inaccurate or incomplete data. In some countries, complete and accurate map information is either not available or is prohibitively expensive.

If the data source lacks a feature, or if an item is mislocated or misidentified, it will be incorrectly identified or missing in the Garmin cartography product as well. Each MapSource product has its strengths and weaknesses, and not all are suitable for every purpose. Please keep this in mind as you use and enjoy the benefits the cartography provides.

Garmin encourages you to report any errors found in our electronic maps by completing our online Error Reporting Form in the Cartography section of our Web site: [www.garmin.com/cartography/mapSource/errorForm.html](http://www.garmin.com/cartography/mapSource/errorForm.html).
INSTALLING MAPSOURCE

Unlocking Maps
Some MapSource products need to be unlocked before you can use the detailed map data. If your product needs to be unlocked, you will find a piece of paper in the product packaging with an Unlock Code or a Coupon Code.

The first time you run MapSource with locked maps installed, the Locked Maps Detected dialog box will prompt you to unlock your maps. You can also unlock your maps from within MapSource. Click Utilities > Manage Map Products.

Unlock Codes and Coupon Codes
An Unlock Code is 25 characters and is printed on a yellow piece of paper or on the product packaging. It unlocks all maps associated with your MapSource product. The yellow paper also includes a serial number and a 7-digit Registration Code. Unlock Codes are included with Garmin devices that also include mapping software. To unlock your product with a 25-Character Unlock Code, see page 2.

A Coupon Code is 8 characters and is printed on the Unlock Certificate. It unlocks a map region of your MapSource product. Coupon Codes are included with software that is packaged separately from a Garmin device. To unlock your product with an 8-character Coupon Code, see page 2.

NOTE: Keep your Unlock Code or Coupon Code in a safe place. You may need this information if you reinstall MapSource. Garmin cannot give refunds or exchanges for MapSource Unlock Codes.
To unlock your product with a 25-Character Unlock Code:
1. In MapSource, click Utilities > Manage Map Products.
2. Select the Unlock Regions tab, and click Add.
3. Enter your 25-character unlock code and then a comment, if desired. Click OK.

To unlock your product with an 8-character Coupon Code:

**NOTE:** An Internet connection is required for the following procedure.

1. In MapSource, click Utilities > Manage Map Products.
2. Select a map product from the list, and click Unlock Online. The Unlock Maps page loads in your Web browser.
3. If the Garmin Communicator Plugin is not installed on your computer, follow the instructions on the Unlock Maps page to install the Garmin Communicator Plugin.
4. Connect your GPS unit to your computer. For more information, see page 6 or consult the owner’s manual for your GPS unit.

5. Click Find Devices. Select your device from the drop-down list, if necessary. The Unit ID of your device appears in the Unit ID field.

6. Enter the serial number found on your device.

7. Enter the 8-character Coupon Code found on your Unlock Certificate. Click Unlock Map. You can now close the Map Product Manager and use MapSource.

Viewing Unlock Codes
If you ever need to view your Unlock Code, you can do so using the Map Product Manager.

To view your installed Unlock Codes:
1. In MapSource, click Utilities > Manage Map Products.
2. Select the Unlock Regions tab.
3. The Map Product Manager displays a list of all of the installed MapSource products.

To view the Unlock Code for a product, select the product, and click Properties.
To delete an Unlock Code for a product, select the product, and click Delete.
Retrieving Unlock Codes
You can retrieve Unlock Codes from Garmin by providing the unit ID and serial number of your device.

NOTE: An Internet connection is required for the following procedure.

1. In MapSource, click **Utilities > Manage Map Products**.
2. Select a map product from the list, and click **Unlock Online**.
3. If the Garmin Communicator Plugin is not installed on your computer, follow the instructions on the Unlock Maps page to install the Garmin Communicator Plugin.
4. Connect your GPS unit to your computer. For more information, see page 6 or consult the owner’s manual for your GPS unit.
5. Click **Find Devices**. Select your device from the drop-down list, if necessary. The Unit ID of your device appears in the Unit ID field.
6. Enter the serial number found on your device.
7. Click **Retrieve Unlocks**. Your unlock codes are restored to MapSource.

Registering Your Product

We highly recommend that you register your MapSource product to gain important benefits:

- You can be notified of product updates as they occur.
- You have proof of purchase on file with Garmin in case your product needs service.
- You have access to reduced-rate mapping data updates.
Changing or Removing MapSource
You can repair MapSource if it becomes corrupted. For some MapSource products, you can modify the regional coverage area. You can also remove any MapSource product from your computer.

Repairing MapSource
In some MapSource products, you can repair MapSource if it becomes corrupt. If this option is not available, you can uninstall and reinstall the product.

To repair MapSource:
1. Insert the MapSource installation disk into your computer disk drive. The installation wizard opens. Click Next.
2. Select Repair and click Next.
3. Follow the additional instructions to repair MapSource.

Modifying Coverage Areas
Some MapSource detailed map products allow you to modify the regional coverage areas. If your MapSource product allows this, Modify appears as an option when you open the MapSource installation wizard.

NOTE: You need your MapSource installation disks to modify MapSource.

To add or remove specific coverage areas:
1. Insert the MapSource installation disk into your computer disk drive. The installation wizard opens. Click Next.
2. Select Modify and click Next.
3. Select the areas you want to add or remove. Click Next.
4. Follow the additional instructions to modify MapSource.
Removing MapSource

You can remove any MapSource product from your computer without using the MapSource installation disks.

To remove MapSource:
1. Click the Start button. Then select Settings > Control Panel.
2. Select Add/Remove Programs.
3. Highlight MapSource and click Change/Remove.
4. Follow the instructions to remove MapSource.

OR
1. Click the Start button. Then select Programs > MapSource > MapSource product Installation Wizard (if enabled).
2. Click Next.
3. Select Remove.

NOTE: To completely remove MapSource, you must also delete the C:\Garmin\USB_Drivers directory from your computer.

Connecting Your GPS Unit to a Computer

Install your MapSource software or run the installation disk for your product before you connect your GPS unit to your computer. If your MapSource product came with a setup guide, follow those instructions to learn how and when to connect your GPS unit to your computer. You can also find this information in your GPS unit owner’s manual.

To connect your GPS unit to your computer:
1. If your GPS unit came with a PC Interface Cable, connect your GPS to a serial communications port on your computer (see illustration below).

Serial Communications Port
If your GPS unit came with a USB data cable, connect your GPS to an available USB data port.

*USB Data Port*

2. Verify that your GPS is turned on and the Serial Data Format is set to Garmin, if applicable.

**To verify proper connection to the computer:**
1. In MapSource, click **Utilities > Get Unit ID**.
2. Verify that the name of your GPS unit appears in the **Device** field. If not, your GPS unit may not be connected properly. Verify that the unit is turned on, check the connection, and then click **Find Device**.
Parts of MapSource
The MapSource window contains five main parts: the (1) toolbars, (2) data tabs, (3) splitter bar, (4) Graphic Map, (5) MiniMap, and (6) status bar.
Loading Maps to Your Garmin GPS Unit

You can load maps to your Garmin GPS in three simple steps:

• Connect your Garmin GPS unit to your computer.
• Select the maps you want to send to your GPS unit.
• Transfer the maps to your GPS unit.

For help connecting your GPS unit to your computer, see page 6 or consult the owner’s manual for your GPS unit. To select maps and send them to your GPS unit, see the next two sections, “Selecting Maps” and “Transferring MapSource Data.” You may also be able to view a tutorial on your MapSource installation disk about selecting and sending maps. The tutorial is also available online at www.garmin.com/cartography/mapsourceTutorial.html.

NOTE: Not all Garmin GPS units can use detailed maps. Check your GPS unit owner’s manual to see if your unit is compatible.

Selecting Maps

Use the Map tool to select the map regions you want to send to your GPS unit.

NOTE: To select map regions, you must unlock your MapSource product. For more information, see page 1.

To select map regions:

1. Zoom to an appropriate distance on the Zoom scale (usually 30-70 miles or 50-100 km).
2. Click the Map tool or click Tools > Map. Move the mouse over the Graphic Map. Each map region becomes outlined in yellow when you move over it with the mouse. The name and size of the map region appear in the status bar.
3. Click a map region to select it. To select several map regions at once, click and drag the mouse over the areas you want to select. Selected map regions are shaded pink.

MapSource User’s Manual
Selected map regions appear shaded in pink. BlueChart® map regions appear outlined in pink.

4. To deselect a map region, click a shaded pink area on the Graphic Map. To deselect several map regions, press and hold the Ctrl key while you click and drag across the map regions you want to deselect.

The map regions you select are called a “map set” and are listed in the Maps tab. Click the Maps tab to view the names and sizes of each map region you have selected.

Check the amount of memory your GPS unit has to store map data. Then check the Maps tab to see how much memory your map set requires. If the map set is too big, deselect some map regions.

Maps Tab

Names of map regions.

Memory needed to store this map set.

Click to rename map set.

NOTE: If your GPS unit supports auto-routing, select the Include route calculation data check box (located at the bottom of the Maps tab).

You can create a route in MapSource and then select all of the map regions surrounding that route. You can also select maps around waypoints or tracks. For more information about creating routes, see page 19.
To select maps around waypoints, routes, or tracks:

Right-click a route, waypoint, or track in its Data tab and click Select Maps Around Route (Waypoint/Track) from the shortcut menu.

**NOTE:** Some MapSource products sell area maps separately. You can only select maps that you have purchased and installed on your computer.

Adding Maps from Multiple MapSource Products

If you have purchased and unlocked multiple MapSource products, you can add maps from more than one MapSource product to a map set. You can only see data from one product on your GPS unit if the maps overlap. The maps are not transparent on the unit and cannot be combined.

If two maps from different MapSource products overlap on your GPS unit, you need to turn the overlapping map off in order to see the other map underneath. Check your GPS unit owner’s manual to learn how to turn MapSource maps on or off.

For example, if you select both Topographical and City Navigator data for the same geographical area, you will not see a combination of topographic and road data. You will only see data from the City Navigator data set. In order to see the Topographical data, hide the City Navigator data in your GPS unit.
Transferring MapSource Data

You can send map sets, waypoints, routes, and tracks to your GPS unit or storage card, or you can receive data from your GPS unit or storage card. You may use one of the following methods to transfer data to or from your GPS unit (check your GPS unit owner’s manual to see what data transfer options are available):

- **Serial or USB Cable**
- **USB Data Card Programmer or USB Data Card Programmer RoHS (USB 2.0)**—You can use this method if your GPS unit uses a Garmin data card (not preprogrammed). The USB Data Card Programmer RoHS works with Windows 2000 or newer.
- **Compact Flash (CF) or Secure Digital (SD) Card Reader**—If your GPS unit uses a CF, SD, micro SD, or transflash card, you can purchase a third-party card reader to transfer data. In some instances, you cannot transfer waypoints, routes, or tracks using a card reader.

Each time you transfer maps to a data card, you completely erase all data currently stored on the card and replace it with new data. However, if you store maps on a data card and you transfer waypoints, routes, or tracks, you will not erase the maps on the card.

You can transfer waypoints, routes, and tracks from a data card to your GPS unit’s internal memory to prevent them from being deleted from your data card. You cannot save maps from a data card to your GPS unit’s internal memory.

**NOTE:** Not all units can accept waypoints, routes, or tracks from a data card. Check your GPS unit owner’s manual to see if your unit is compatible.

**iQue® Users**

To transfer data to and from an iQue, you may need to synchronize with your personal computer. You may not be able to send or receive all types of data to/from your iQue. For more information, refer to your iQue owner’s manual.
BlueChart, Fishing Hot Spots, and LakeMaster Data Cards

Preprogrammed BlueChart, BlueChart g2, Inland Lakes, Fishing HotSpots, Recreational Lakes with Fishing HotSpots, and LakeMaster data cards should not be used in the USB Programmer or in a GPS unit for saving MapSource maps—you will lose the preloaded data. Remove this preprogrammed data card from your GPS unit before you transfer maps, routes, waypoints, or tracks. MapSource warns you if you are in danger of erasing data. If you overwrite the preloaded data, Garmin will not replace or recover it.

Reloading the POI Database

If your GPS unit includes a preloaded/preprogrammed Points of Interest (POI) database, you will see a warning about erasing this preloaded data before you save MapSource maps. This warning does not refer to the basemap of your unit. You can restore the preloaded data to your GPS unit by downloading it from the Garmin Web site.

To reload Points of Interest:
2. Select Support > Updates & Downloads.
3. Click Additional Software.
4. Click the name of your GPS unit.
5. Under Unit Software, click Download.
6. Click to agree to the terms of the Software License Agreement.
7. Under Download Preloaded POI Database, click Download.

Any MapSource maps on your GPS unit will be erased and replaced with the POI database.
Sending Data to Your GPS Unit
If your GPS unit has a storage card, verify that the card is inserted correctly into the unit. Also, connect your GPS unit to your computer and set your unit’s Data Transfer mode to Garmin, if applicable (see your unit owner’s manual for instructions).

You can send maps, waypoints, routes, or tracks to your GPS unit.

**NOTE:** MapSource transfers all of the data listed in a data tab to your GPS unit each time you transfer data.

To send data to a GPS unit or card reader:
1. Verify that the data you want to send appears in the corresponding data tabs on the left side of the MapSource window.
2. Click Send To Device or click Transfer > Send To Device.... The name of your GPS unit or card reader should appear automatically in the Device menu. If not, click Find Device.
3. Under What to Send, check the boxes next to each type of data you want to send.
4. Click Send. MapSource begins sending data to your GPS unit or card reader. After you begin transferring data, you can check the box next to Turn Off GPS After Transfer, if available.
5. If you are using an iQue or cf Que, synchronize with your personal computer, if necessary, so that your unit receives the data.
Receiving Data from Your GPS Unit

If your GPS unit has a storage card, verify that the card is inserted correctly into the unit. Also, connect your GPS unit or card reader to your computer and set your unit’s Data Transfer mode to Garmin, if applicable (see your unit owner’s manual for instructions).

You can receive waypoints, routes, and tracks from your GPS unit.

To receive data from a GPS unit or card reader:

1. If you are using an iQue, synchronize with your personal computer, if necessary, so that you can send information to MapSource.

2. Click Receive From Device, or click Transfer > Receive From Device. The name of your GPS unit or card reader should appear automatically in the Device menu. If not, click Find Device.

3. Under What to Receive, check the boxes next to each type of data you want to receive.

4. Click Receive. MapSource begins receiving data from your GPS unit or card reader. The data appears in the corresponding data tabs on the left side of the window.
Creating and Editing Waypoints

A waypoint is any point on the Graphic Map that you store in memory. Waypoints are also known as “My Locations” or “Favorites” in some GPS Units. You can easily create waypoints in MapSource and then transfer them to your GPS unit. You can also load waypoints from your GPS unit into MapSource and then edit them. To send and receive information from your GPS unit, see page 12.

Creating Waypoints

When you create a waypoint, MapSource automatically names the waypoint based on its location. If you create a waypoint on an existing map feature, MapSource bases the waypoint name on the feature. If you create a waypoint on an open location, MapSource names the waypoint with a number. Each waypoint you create appears in the Waypoints tab on the left side of the window.

To create a waypoint:
1. Click the Waypoint tool or click Tools > Waypoint.
2. Locate the place and then click anywhere on the Graphic Map to create a waypoint at that exact spot. To create a waypoint in the center of the Graphic Map, press Ctrl + W on your keyboard. The Waypoint Properties dialog box appears.

3. Make changes to the waypoint properties as necessary. Click More Details to view all available waypoint properties.
4. Click OK to save the waypoint. Click Cancel to exit without creating the waypoint.
Editing Waypoints
You can edit the properties of a waypoint by opening the Waypoint Properties dialog box using any of the following methods:

- Double-click a waypoint name listed in the Waypoints tab.
- Click the Selection tool. Then double-click a waypoint on the Graphic Map.
- Right-click any waypoint in the Waypoints tab or on the Graphic Map. Then select Waypoint Properties.

Finding Places
In MapSource, click the Find button to open the Find Places dialog box where you can easily find cities, Points of Interest (such as restaurants, parks, and shops) addresses, intersections, or waypoints.

To have the most available search options from your MapSource product, you must unlock your maps. See “Unlocking Maps,” page 1.

As you type places to search for in the Find Places dialog box, MapSource uses an auto-complete list to make suggestions. For example, as you type the name of a city, a list of cities appears matching the letters you type. You can choose the city directly from the auto-complete list or finish typing the name of the city.

NOTE: If the place you are searching for does not appear in the auto-complete list, MapSource will not allow you to continue typing. Verify the correct spelling of the place.
**To find a place:**
1. Click Find Places or click Find > Find Places.
2. Click one of the following tabs: City, Feature, Address, or Intersection.
3. Start typing or selecting the search criteria.
4. Click Find to show a list of matches in the Places list. If you see the message “No items found,” try using more general search criteria.
5. Click to highlight the correct place from the list. The place appears on the Graphic Map.
6. Click Make Waypoint if you want to save the place as a waypoint. Click OK to close the Find Places dialog box. Click Cancel to close and return to the part of the map you were previously viewing.

**Finding Nearest Places and Recently Found Places**

In MapSource, click the Find Nearest Places button to open the Find Nearest Places dialog box where you can search for map features and other places near a specific location on the Graphic Map. You can find places near a waypoint, any map location, or the center of the Graphic Map (default).

Click Recently Found Places to open the Recently Found Places dialog box where you can view a list of places you have searched for recently.
Creating and Editing Routes

Routes tell you how to get from one place to another. Depending on your MapSource product, you can create a direct route (a straight-line route), or an auto-route (turn-by-turn over roads).

Creating Routes

You can create and modify routes in MapSource by using the Route Properties dialog box, the Route tool, or the Waypoints tab. A route can contain several points; each point is called a via point.

NOTE: Not all MapSource products can create an auto-route. You must be using a routable MapSource product for MapSource to calculate an auto-route.

To create a route using the Route Properties dialog box:

1. Press Ctrl + R or click Edit > New Route to open the Route Properties dialog box.

2. To add a city, point of interest, address, or intersection, click the Find Places button inside the dialog box.

3. If you have previously created waypoints and want to add them the route, click Insert Waypoint. Select the waypoint from the list that appears. To select multiple waypoints, press the Ctrl or Shift key while you click several waypoints. Then click OK.

4. Repeat steps 2–3 until you are finished adding points to your route. Each point you add is listed in order from first to last under the Via Points tab.

5. To rearrange the points in the list, highlight each point and click the arrows to move the point up or down in the list. To reorder the points from last to first, click Invert.
To view a point on the map, highlight the point and click **Show on Map**. You can also check the box next to **Center map on selected item** to see a selected point in the center of the map.

6. Click **OK** to save the new route.

**Editing Routes**

You can edit routes directly on the Graphic Map or using the Route Properties dialog box.

From your route on the Graphic Map, you can add, move, and remove waypoints using the selection tool.

![Route Properties dialog box](image)

![Moving a route waypoint on the Graphic Map](image)
From the Route Properties dialog box, you can:

- Add points to a route
- Rename a route
- Invert a route
- Link a file or URL to a route
- View a vertical profile for a route
- View and print text directions for an auto-route
- Delete a route

For more information, refer to the MapSource Help system. Click Help > MapSource Help or press F1 on your keyboard to open the detailed MapSource Help files.

**Tracks**

Tracks are trails on the Graphic Map that show exactly where you have been. The track appears as a tiny dotted line made up of track points. As you move, your GPS unit records a track point every second (by default) with the time and your position and speed. Your GPS unit then saves these points as a track.

**Viewing Tracks**

Tracks received from your GPS unit appear in the Tracks tab after you receive them. You can view tracks on the Graphic Map and edit them using the Track Properties dialog box.

Double-click any track in the Tracks tab to open the Track Properties dialog box. You can change the track name and color, invert the track, view a vertical profile of the track, and view and edit track points. For more information, see “Transferring MapSource Data” on page 12.
Customizing MapSource
After you become comfortable using MapSource, you may want to customize preferences to meet your needs. You can change many settings by opening MapSource Preferences. Click Edit > Preferences to open the Preferences dialog box.

About Google Earth™
With Google Earth installed on your computer, you can view waypoints, tracks, and routes saved in MapSource. Select an item in the data tabs and then select View > View in Google Earth.

Go to http://earth.google.com to download the Google Earth application.

Filtering Tracks
Each track point contains time, position, and speed information. From the Track Properties dialog box, click Filter. When you filter a track you have loaded from your GPS unit, you tell MapSource which track points you want to keep and which to discard. You can filter track points by time or distance, or you can let MapSource filter the track points automatically.

Track Properties dialog box
